

Literature Mining and Curation

- Reading, interpreting, curating bio-literature
- Labor-intensive, error-prone and expensive task
 - ⇒ Natural Language Processing (NLP) techniques:
 - ✓ extract knowledge from papers
 - ⇒ Semantic techniques:
 - ✓ connect information from various sources

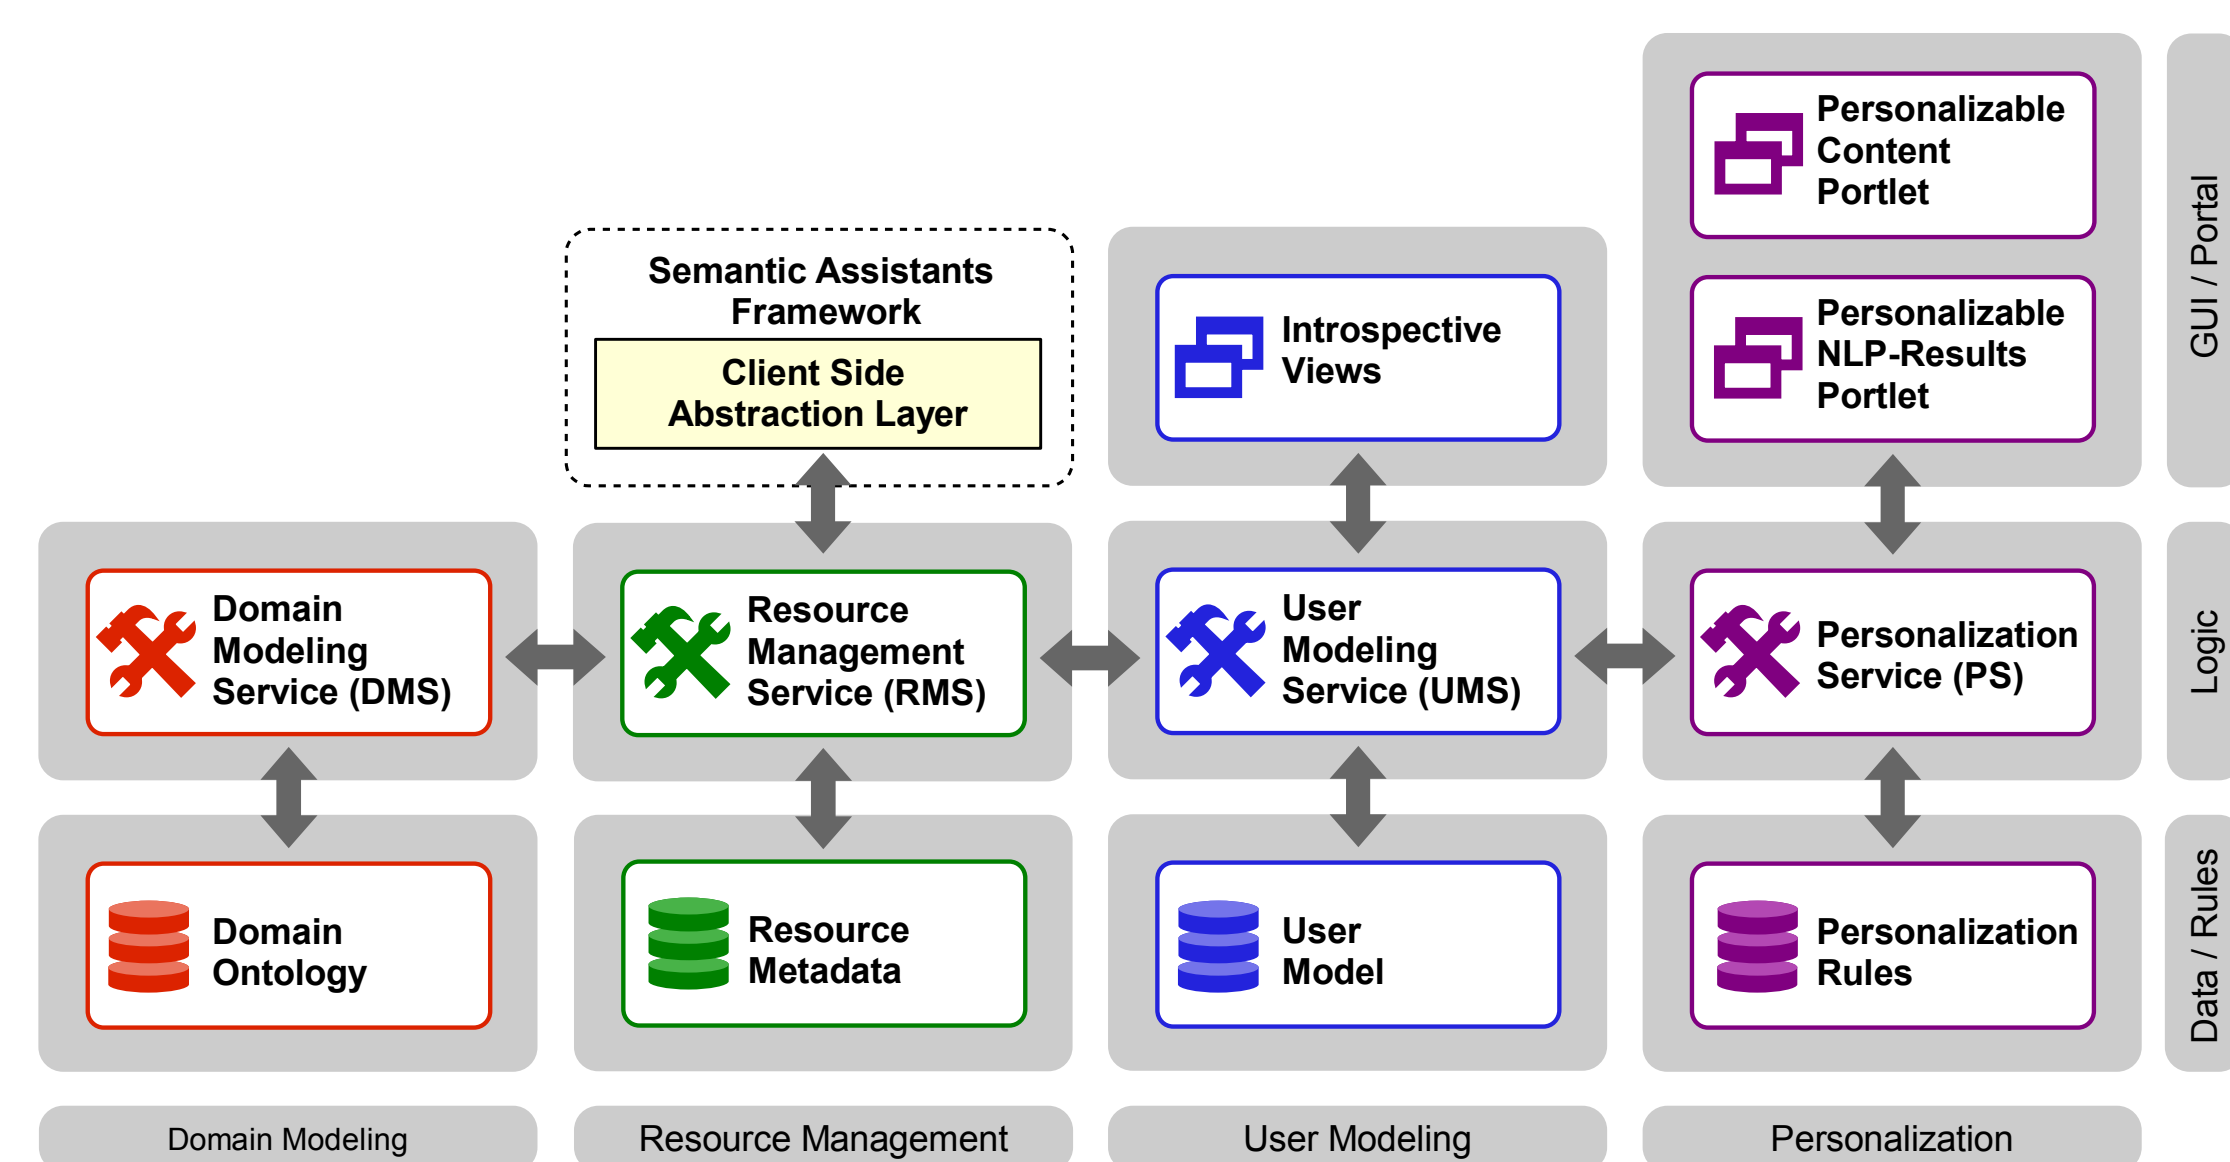

Web Platform

- Personalized view and results of semantic analysis

- Content processing with indexers, summarizers, named entity extractors, etc.
- User-defined display of results (map, index, highlighting in the source text, etc.)

System Architecture

Introspective Views

Acknowledgment

Funding: Genome Canada, Génome Québec, NSERC, IBM Deutschland R&D GmbH. Collaboration: J. Powlowski and all the participants of the user study at CSFG. Technical support: Andrei Wasylyk

- Rich-interaction visualization of semantic user models
- Follows Ben Shneiderman's information seeking mantra
- Overview first, zoom and filter, then details-on-demand
- Intuitive mechanisms for editing user models
- Direct propagation of model changes on the content
